

Key Skills

Programming Languages:
Python Java C, C++,HTML
(Learning). Data Science &
Visualization: Machine Learning
Data Analysis(Beginner).
Development Tools: Full-Stack
Development

Courses

Courses and Certifications

- Fundamentals of data science
- Data science
- Database management system

Certifications:

- Infosys
- Deloitte
- Udemy
- Novitech
- Cognifyz
- Brainery spot technology

Strengths

Analytical and problem-solving
Strong foundational knowledge in
programming and emerging
technologies. Highly adaptable,
quick learner, and an effective
team player. Quick learner with a
passion for technology and
innovation. Effective communicator
and team player, with a focus on
collaboration

Profile Summary

A highly dedicated and enthusiastic Computer Science Engineering student with strong interest in Web Development and Data Science. Demonstrates sincerity, commitment, and a strong desire to learn new technologies. Gained hands-on experience through internship projects, showcasing excellent problem-solving skills, attention to detail, and the ability to complete tasks with professionalism. Always eager to take on new challenges and deliver quality results.

Internship

Web Development Intern – CodSoft

Duration: 1 Month (Virtual Internship)

Worked on practical web development tasks that strengthened technical understanding and design skills. Demonstrated creativity, dedication, and consistency throughout the internship.

Key Tasks Completed:

Portfolio Website:

Created a clean and responsive personal portfolio using HTML & CSS. Included About, Skills, Projects, Resume, and Contact sections.

Landing Page:

Designed a landing page with proper structure, alignment, color balance, and responsive layout.

Basic Calculator:

Developed a simple calculator using HTML, CSS, and JavaScript. Implemented event listeners and CSS grid for layout structure.

Web Development Intern – Cognifyz Technologies

Duration: July 2025 – August 2025

Displayed strong dedication, sincerity, and commitment to learning throughout the internship. Effectively coordinated tasks, communicated clearly, and delivered assigned work with precision. Demonstrated positive attitude, willingness to learn, and passion for Web Development

Projects

1. Number Guessing Game (Java Project – Task 1)

Developed an interactive number guessing game using Java, where the system generates a random number and the user attempts to guess it. Implemented features such as attempt limits, detailed feedback (too high/too low), and score tracking based on performance. This project strengthened my understanding of loops, conditionals, user input handling, and random number generation in Java.

★ 2. Currency Converter

Application (Java Project – Task 4)

Built a Java-based currency converter that allows users to select base and target currencies and converts the entered amount using API-based real-time exchange rates. Designed a clean console interface for smooth user interaction. Improved skills in API integration, data parsing, exception handling, and applying Java logic for real-time calculations.

★ 3. Student Management System (Java Project – Task 5)

Created a Student Management System using Java to add, update, search, and manage student records. Implemented file handling for saving and retrieving student data. Designed a structured console UI and added validation to ensure accurate data entry. This project enhanced my skills in OOP concepts, class design, file operations, and building modular Java applications.

: Python, AI/ML frameworks (e.g., TensorFlow, PyTorch), and web technologies like HTML

Interactive Responsive Website Development

Level: Beginner (Where Data Meets Intelligence)

Description: Developed a fully responsive and interactive website using modern front-end technologies. Implemented structured HTML layouts, applied various CSS styling approaches, integrated JavaScript interactivity, and connected external APIs to deliver dynamic content. The project demonstrates strong fundamentals in web development, responsive design, and client-side scripting.

Key Contributions:

- Built the complete webpage structure using **HTML5** with headings, paragraphs, images, and semantic elements. Applied **inline and external CSS** to style components, modify typography, colors, and background.
- Implemented **responsive design** using media queries to ensure smooth display across mobile, tablet, and desktop devices. Added interactive UI features such as a **JavaScript-powered button** that triggers background color changes.
- Integrated **public APIs** using `fetch()` to retrieve and display JSON data dynamically on the webpage. Designed and styled user input forms with CSS and added **client-side validation** using JavaScript to improve usability and data accuracy.

Languages

SKILLED IN PROGRAMMING LANGUAGES:

- PYTHON
- JAVA
- C PROGRAMMING
- C++
- HTML(BEGINNER)

Education

Bachelor of Engineering in Computer Science and Engineering
Kathir College of Engineering
(2023- 2027)
